Division: Mobile

PERSONAL REPORT ON THE PROJECT 'LECTURE-MONITOR'

I have really learnt quite a lot from this course, software engineering and my team, ARATECH.

The experience was very good when we were in school because we usually met most of the times to accomplish certain tasks in the LECTURE-MONITOR project. It was there that I learnt how to use gitbash and I have learnt some git commands over there and how to commit after coding too. I implemented the log in page on our android app which we are yet to complete; i.e. where you can find the username, password and forgotten password. Also, I also brought up some ideas on how application intro screen should look like, especially the colors of our app. I have also learnt how to use android studios app.

It is not that easy at home but with help of applications like zoom, teamViewer, asana and meet we are still coping. I have been able to create the class and personal timetable model for the mobile app. It is quite unfortunate time won't permit me to add up more of the things I have come to know so far to our LECTURE-MONITOR app. It is through this course and project that have given me the interest to continue with software engineering
